Why architects choose

Madero FiberComp Door Systems:

Madero
INSULATING CONCRETE FORM
SYSTEM **ICF**

► Strength

Doors

Steel-reinforced hardwood construction, polymer stiles and rails and impact-resistant fiberglass GRP (glass reinforced polyester) skins provide incomparable maintenance-free durability and strength.

Composite jambs

Resilient fiber-resin compound material with high strength-to-weight ratio has twice the screw-holding power of wood.

The FiberComp door system passes the highest level of forced entry testing.

► Eliminates need for on-site jamb extensions

Custom Jamb Depths

Pick a size, we'll make it!.... Custom depths to suit all wall structures, from 4" deep to 16", and all sizes in between.

FiberComp Rough Opening Sizes For 6/8 height

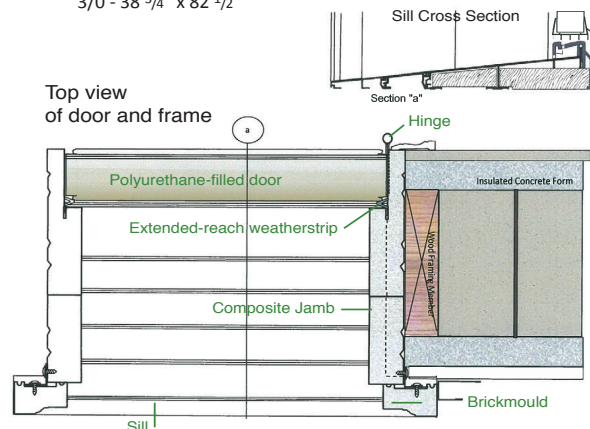

Inswing	2/6 - 32 3/4" x 82 1/2"	6/10, 7/0, and 8/0 heights also available in select door designs.
	2/8 - 34 3/4" x 82 1/2"	
	2/10 - 36 3/4" x 82 1/2"	
	3/0 - 38 3/4" x 82 1/2"	

► Energy efficiency

A 100% CFC free polyurethane-filled door with nine times the thermal efficiency of wood; a custom-fitted jamb with a moisture tight seal for prevention of heat-loss.

► Fire resistance

FiberComp systems are available with a 20 minute label upon request.

Door

A white, smooth-surfaced fiberglass door, with a solid pigment skin that can be primed and painted.

- Compression moulded high-definition panels.
- Resists scratches, dents, warping and rotting.
- Withstands Canadian weather extremes.
- Developed and manufactured by Nan Ya Plastics, distributed by Madero Doors & Hardware.
- 25 year limited warranty.

Jamb and Sill

Using composite jambs, we produce factory-built maintenance-free pre-hung doors for wall depths from 4" - 16". Available as single doors, door sidelite units, and garden doors.

Door model shown: SG38
See www.madero.ca for other panel designs.
