

This cross reference is intended for the use of architects and contract hardware distributors in establishing comparisons between the hinge products of McKinney and other manufacturers.

These listings have been carefully compiled from the most recent catalogs of the manufacturers involved and it is believed that it represents a fair comparison between the product lines. While all contract grade hardware is to be manufactured in accordance with BHMA and ANSI standards, McKinney assumes no responsibility for the accuracy of this list of competitors' numbers and suggests that both manufacturers' catalog and templates be consulted for additional information.

McKinney welcomes the opportunity to consult with any architect, distributor, contractor or builder at any time regarding any matter concerning the specification of our products.

Note: McKinney pioneered the use of "Oil Lite" bearings in 1935 for improved bearing performance. The standard five knuckle bearing hinges manufactured by McKinney are furnished with oil-impregnated bearings (TA). However, ball bearings can be supplied as specified.
